PROFESSIONAL SUMMARY

Dedicated Java Developer with 2+ years of experience in designing and developing scalable backend systems using Java, Spring Boot, and Hibernate. Strong understanding of Core Java concepts including OOP, Collections, Exception Handling, and basic Multithreading. Experienced in building RESTful APIs, microservices architecture, and integrating frontend applications. Proficient in optimizing application performance and collaborating in Agile environments

Technical Skills

Core Java: OOP, Collections, Exception Handling, Multithreading, JVM Basics

Backend: Spring Boot, Spring Core, Spring Data JPA, Hibernate, REST APIs, Microservices

Frontend: Angular / React (Basic)

Database: MySQL

Tools: Maven, Git, Jenkins, Docker, Postman

Design Patterns: Singleton, Factory, MVC

PROFESSIONAL EXPERIENCE

MPHASIS Limited

Java Developer | May 2023- August 2025

- Designed and developed RESTful APIs using Spring Boot and Hibernate
- Implemented layered architecture (Controller-Service-Repository)
- Improved application performance by optimizing database queries
- Used Maven for build and dependency management
- Integrated frontend UI with backend services
- Collaborated in Agile/Scrum teams for timely delivery

PROJECTS

1. Role-Based Hospital Management System with Secure REST APIs

- Developed a role-based hospital management system to streamline patient and doctor interactions using Java and Spring Boot. The application provides modules for admin to manage doctors and for users to book appointments based on specialization.
- Implemented RESTful APIs with proper request validation and exception handling. Used Hibernate (JPA) for efficient database interaction with MySQL. Designed the application using layered architecture and followed best coding practices.
- Integrated frontend (React) with backend services to enable real-time appointment booking and management. Focused on performance optimization and maintainability.
- Developed REST APIs for doctor management and appointment booking
- Implemented role-based functionalities (Admin/User)
- Used Hibernate (JPA) with MySQL for database operations
- Applied layered architecture for clean code design
- Integrated frontend using React
- Implemented validation and exception handling

2. Microservices- Movie Ticket Booking System

- Designed and developed a scalable microservices-based movie ticket booking system using Spring Boot. The application is divided into multiple services such as User Service, Movie Service, Booking Service, and Payment Service to ensure modularity and scalability.
- Implemented RESTful APIs for ticket booking, movie management, and user operations. Integrated Hibernate (JPA) with MySQL for efficient data persistence.
- Applied JWT-based authentication and role-based authorization to secure APIs. Implemented global exception handling and logging for better system reliability.
- Used Maven for build management and followed layered architecture (Controller-Service-Repository).
- Frontend integration was done using React for seamless user interaction.
- Frontend integration was done using React for seamless user interaction.

EDUCATION

2018-2022| Sasi Institution of Technology & Engineering.

Bachelor of Technology(B.Tech)in ECE.
